| Âge                      | Âge atteint en années, mois, etc.  |

### Données

- Sauf indication contraire, reflètent les événements au Nouveau-Brunswick impliquant des résidents et des non-résidents.
- Sauf indication contraire, les taux sont basés sur une tranche de population de 1 000 personnes.

**Notes:**

- Causes of death are coded according to the World Health Organization's International Statistical Classification of Diseases and Related Health Problems (ICD-10) – Tenth Revision, which was put into effect by Vital Statistics on January 1, 2000.
- Prior to 2000, the rates for perinatal deaths were calculated based on total births, which included all live births and stillbirths, regardless of gestational age. Now, the rates for perinatal deaths are calculated using live births and stillbirths of 28+ weeks gestation.
- The figures may vary slightly from those in the Department of Health and Wellness' Annual Report due to additions and amendments made to the database.

**Nota :**

- Les causes de décès sont codées selon la Classification Statistique internationale des maladies et des problèmes de santé connexes (CIM-10) – Dixième révision, publiée par l'Organisation mondiale de la santé. La CIM-10 fut adoptée par les Statistiques de l'état civil le 1<sup>er</sup> janvier 2000.
- Avant l'année 2000, le calcul des taux de mortalité périnatale était basé sur toutes les naissances, soient les naissances vivantes et les mortinaissances, sans tenir compte de la période de gestation. Maintenant, les taux de mortalité périnatale sont calculés en utilisant les naissances vivantes et les mortinaissances de 28+ semaines de grossesse.
- Les chiffres peuvent varier légèrement de ceux du rapport annuel du ministère de la Santé et du Mieux-être en raison des additions et des modifications apportées à la banque de données.
